

US BioTek Laboratories

Painkiller Antibody Panel

Available now

Are exposures to common everyday painkillers causing harm to your patients?

From our in-house research, an average of 68% and 42% of patient samples tested reveal elevated specific-IgG and IgA antibodies, respectively, to these common drugs.

According to statistics, Americans consume an estimated \$2 billion per year in over-the-counter painkillers like

Tylenol, Advil and Motrin.

Because these drugs are readily available to the consumer without a prescription, clinical assessment for avoidance measures is important to prevent inadvertent overuse and adverse events.

US BioTek Laboratories now offers semi-quantitative ELISA for the identification of specific-IgG and IgA antibodies to:

**Acetaminophen
Aspirin
Ibuprofen**

Sample Requirements:

Serum: 1 ml

Blood Spot: 2 Blood Collection Cards
